

Software Development Brief: Cross Stitch Pattern Designer

Dev Phase One

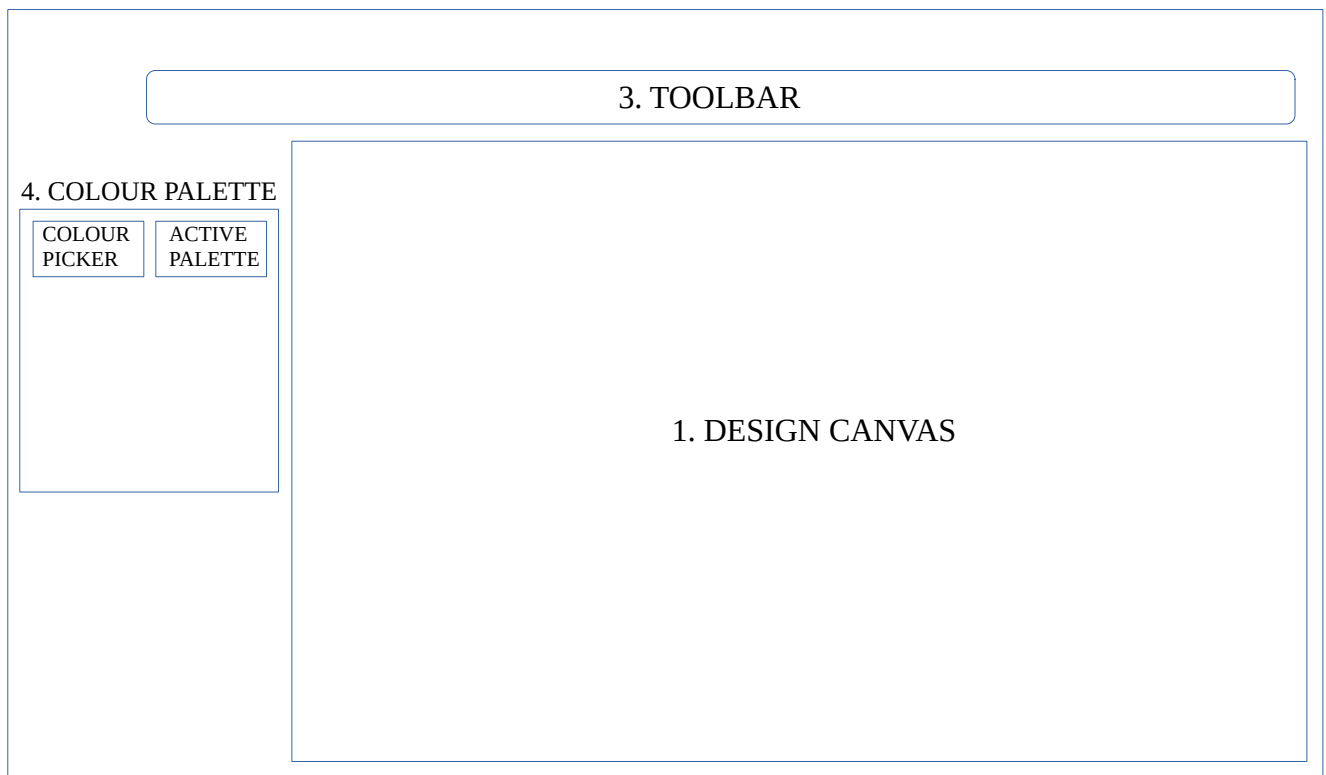

Overview

A streamlined design experience for creating cross stitch patterns with an uncluttered, clean UI.

Main “Design Canvas” comprises of a 10 by 10 grid system with the ability to import an image file to sit behind the “Design Canvas” allowing traceability of the image onto the editable design grid that overlays it.

A toolbar is needed with the ability to toggle functions on and off, along with the ability to export the finished image initially as a JPEG or PNG file with transparent background.

Layout Example

Functionality Details

- 1. The Main Workspace/ “Design Canvas”**
 - 10 by 10 grid system – user can set full canvas size on start up or when creating new file
 - Optional guidelines to assist with design (toggle on/off via the Toolbar)
 - Toolbar with the functions detailed in Point (3)
 - A Colour Palette Box detailed in Point (4)

2. **Import Image to sit behind “Design Canvas”**

- Functionality to import images to sit “behind” the canvas for tracing designs from the imported images
- Option will be needed within the Colour Palette Box to access and edit this image
- Ability to re-size image behind the grid

3. **Toolbar Functions**

- **“X” stitch** – when toggled on will apply a cross to fill selected boxes within the grid
- **Eraser** – removes “X” stitch from grid squares
- **Select** – single square, multiple squares, free select tool to encompass specific areas
- **Delete** selection
- **Cut** Selection
- **Copy** selection
- **Paste** selection – Option to flip pasted selection to opposite side (create mirror effect)
- **Fill** selection with specified colour from the colour palette

4. **Colour Palette Box**

- **Tab 1 : Colour Picker** - Initially start with just four colours – black, white, blue and yellow
- **Tab 2 : List of each colour added to the palette:**
 - Colour thumbnail, colour name, number of stitches on the design canvas of that colour (tracked from the grid)
 - Option to add further colours to the list, or easily remove a colour from the palette
 - Option to select all stitches on the canvas of the selected colour and change the colour
